

ARTIFICIAL GRASS OUTLET

Maintenance & Care Tips

Care & Grooming Tips

CLEANING & BRUSHING YOUR TURF

DO

Regularly remove the organic materials by hand and rinse the artificial turf surfaces with a hose.

Use a leaf blower, rake and brush to keep your lawn looking fresh and new for a very long time.

DO

Brush your turf with a stiff broom to keep the blades standing up straight. Areas exposed to high traffic may require more brushing than others.

Brush the grass against the grain in high traffic areas. Brushing against the grain will help avoid matting.

FIRE & WEED ISSUES

DO

Weeds can grow on top of synthetic grass. To kill them, use good old apple cider vinegar in a garden pressure sprayer.

Spray so that you saturate the grass to reach the seeds that are germinating and those that are hiding in between blades.

Do not over spray on your plants. Then pull out weeds you see on the surface. You don't want them decomposing down into the blades.

Use a grooming rake to agitate the surface to help brush up the blades. Use a leaf blower to remove any remaining organic material.

Re-apply as needed and maintain.

DON'T

Be sure that your turf is not exposed to any extreme heat created by reflective glass that may magnify the sunlight and burn the turf.

Keep any kind of flames away from the turf (cigarettes, grills, fireworks, etc).

Don't lay hot landscape tools on turf, the motor will melt the turf.

Care & Grooming Tips

PET AREAS

DO

Flush the turf areas that have been exposed to urine/waste with a hose as needed.

If you notice any unpleasant odors a mixture of distilled vinegar and water or “Simple Green” can be used to neutralize them.

DON'T

When removing feces be sure to remove from the surface. Do not hose the feces into the turf

DEEP CLEANING & STAINS

DO

For harder to remove stains, mix basic household detergent with water or use Simple Green®. Avoid using cleaners containing chlorine bleach.

DONT

We discourage the use of bleach and other toxic or harsh products. You may void your warranty or create a toxic environment for your family and pets.

Always RINSE the lawn and dilute the treatments to help them go through the backing and deep into the base and soil materials.

REFRESHING THE TURF

DO

Use a hose and spray nozzle to freshen up turf if you live in areas with scarce rain.

DONT

Never use a power washer. A sprinkler setting is a better way to rinse, allowing the water to saturate the surfaces, and then drain through.
